STUDIO FIELDNOTES / ARTS INTEGRATION / K–2

Geometry of a Neighborhood

Teacher guide · K–2 · 45–55 minutes × 2–4 sessions

Essential question

How do shapes help people recognize places?

Why this investigation matters

Compare circles, rectangles and triangles in buildings and make a symbolic neighborhood map

The finished work

Invent a model block with a legend and four labeled geometric forms

Methods and material suggestions

shape attributes, map symbols; choose materials suitable for your space: drawing and collage materials, paper, water-based media, or clean reclaimed objects as appropriate.

Learning targets

Students will: analyze a relevant visual or disciplinary source; experiment with shape attributes, map symbols; create an original response; give and use evidence-based feedback; and explain one artistic choice.

Teaching progression

01 / Engage

Show the inquiry question: How do shapes help people recognize places? Invite a noticing, a wonder, and an initial interpretation.

02 / Investigate

Examine relevant diagrams, data and field observations. Compare circles, rectangles and triangles in buildings and make a symbolic neighborhood map Students annotate the evidence that supports their thinking.

03 / Skill Studio

Demonstrate shape attributes, map symbols with a short material experiment. Students test the technique and record what changes.

04 / Generate

Produce at least two distinct visual approaches to the challenge. Compare how each communicates the idea.

05 / Plan

Choose an approach, identify materials and sketch a sequence of actions. Name one foreseeable difficulty.

06 / Produce

Create the original artwork or design: Invent a model block with a legend and four labeled geometric forms. Photograph or annotate work in progress.

07 / Critique

Use evidence-based peer feedback: one element that communicates, one question, one suggested next move.

08 / Revise

Make one visible revision in response to critique or new evidence. Record before-and-after choices.

09 / Present

Display or share the result with a student-authored explanation and credits for research sources.

10 / Reflect

Return to the inquiry question and explain what the work now communicates, what changed and what could improve next time.

Standards and adaptation

Visual Arts Creating/Connecting plus Mathematics reasoning; adapt core standards to the exact course and grade level.

Do not substitute artistic polish for accuracy of evidence; assess each discipline separately.

Differentiation and access

Offer visual exemplars, tactile or large-print materials, verbal/audio explanations, partner brainstorming, alternate motor tools, and choice in subject matter. Model a single technique, then invite students to make two choices and describe one with words, drawing, or speech.

Teacher checks

Before: Ask students to answer: How do shapes help people recognize places? Record a drawing, annotation or discussion response.

During: Look for purposeful use of shape attributes and a clear link between research evidence and design choices. Ask students to explain an alternative.

After: Compare first plan and revised result; collect a student statement naming one choice, one change, and the evidence that motivated it.

Source and representation care

Research original works using the cited museum or artist resources. Do not imply the supplied editorial cover graphic depicts the artist or their copyrighted artwork. Credit creators and seek permissions for reproductions. Check the relevant core-content standards and source accuracy before teaching.
